OFDM (Orthogonal Frequency Division Multiplexing) modulation

**Fig. 6**

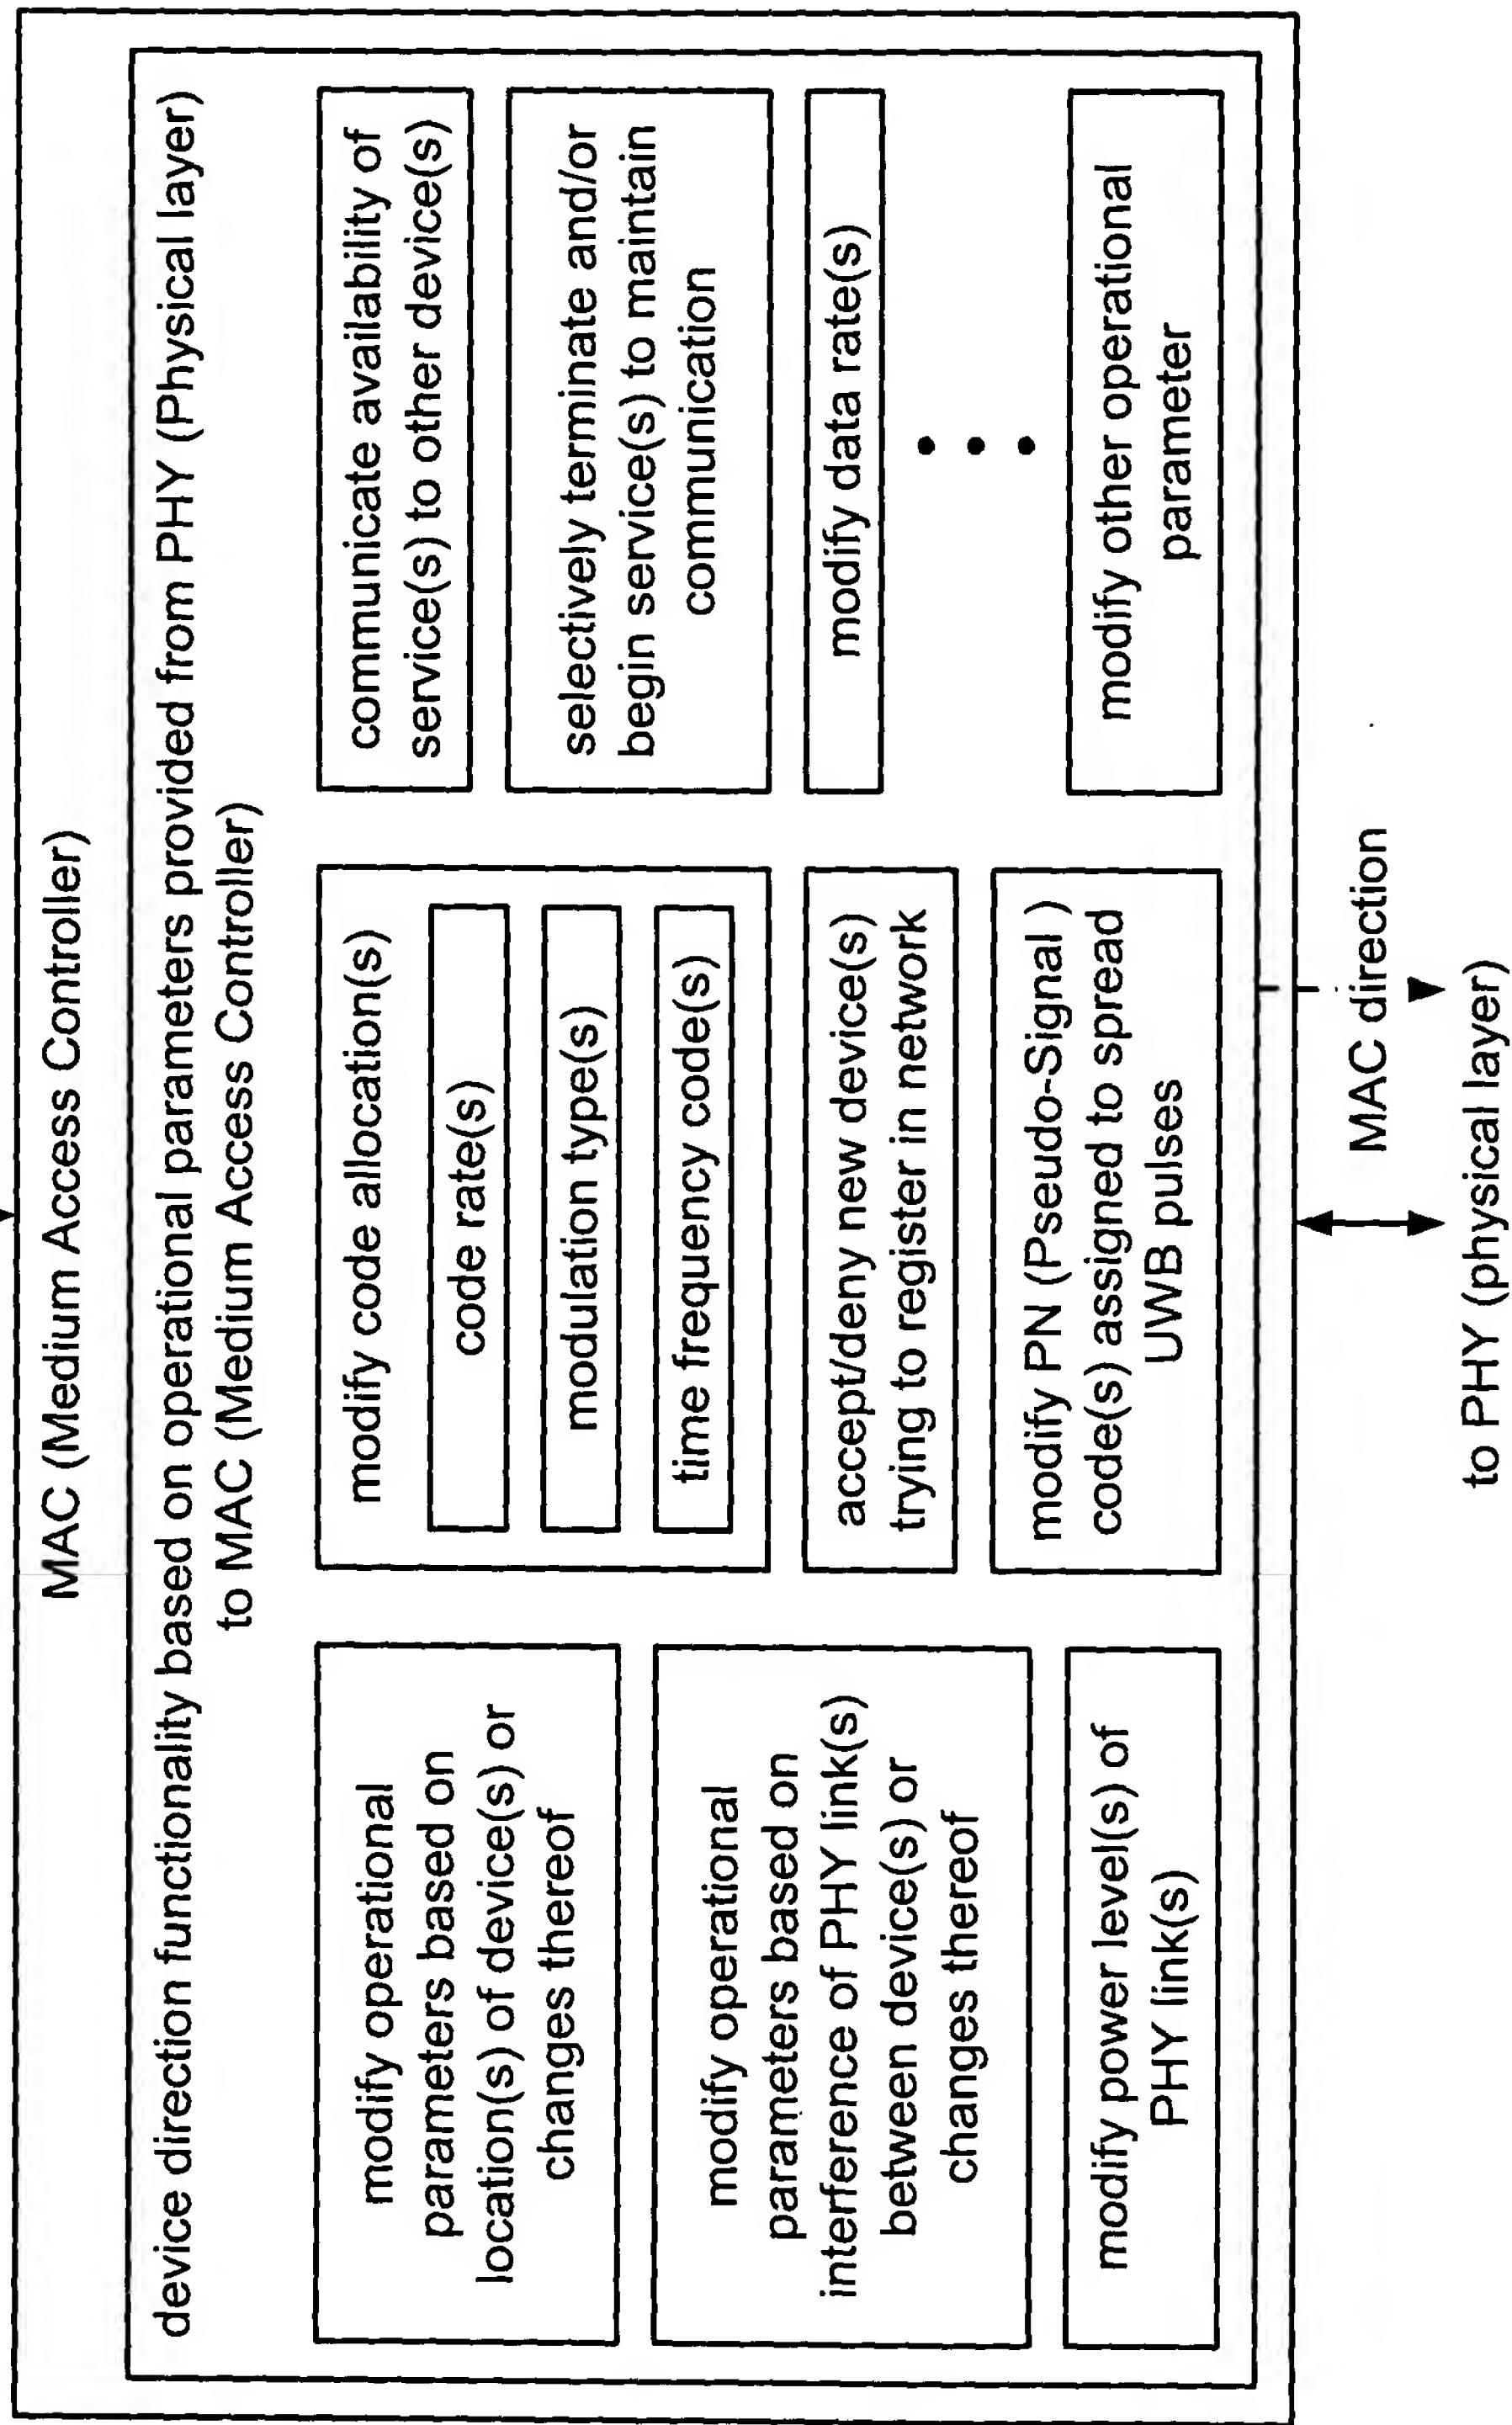

providing link quality intelligence from physical layer to higher protocol layers  
**Fig. 7**

**Fig. 8**

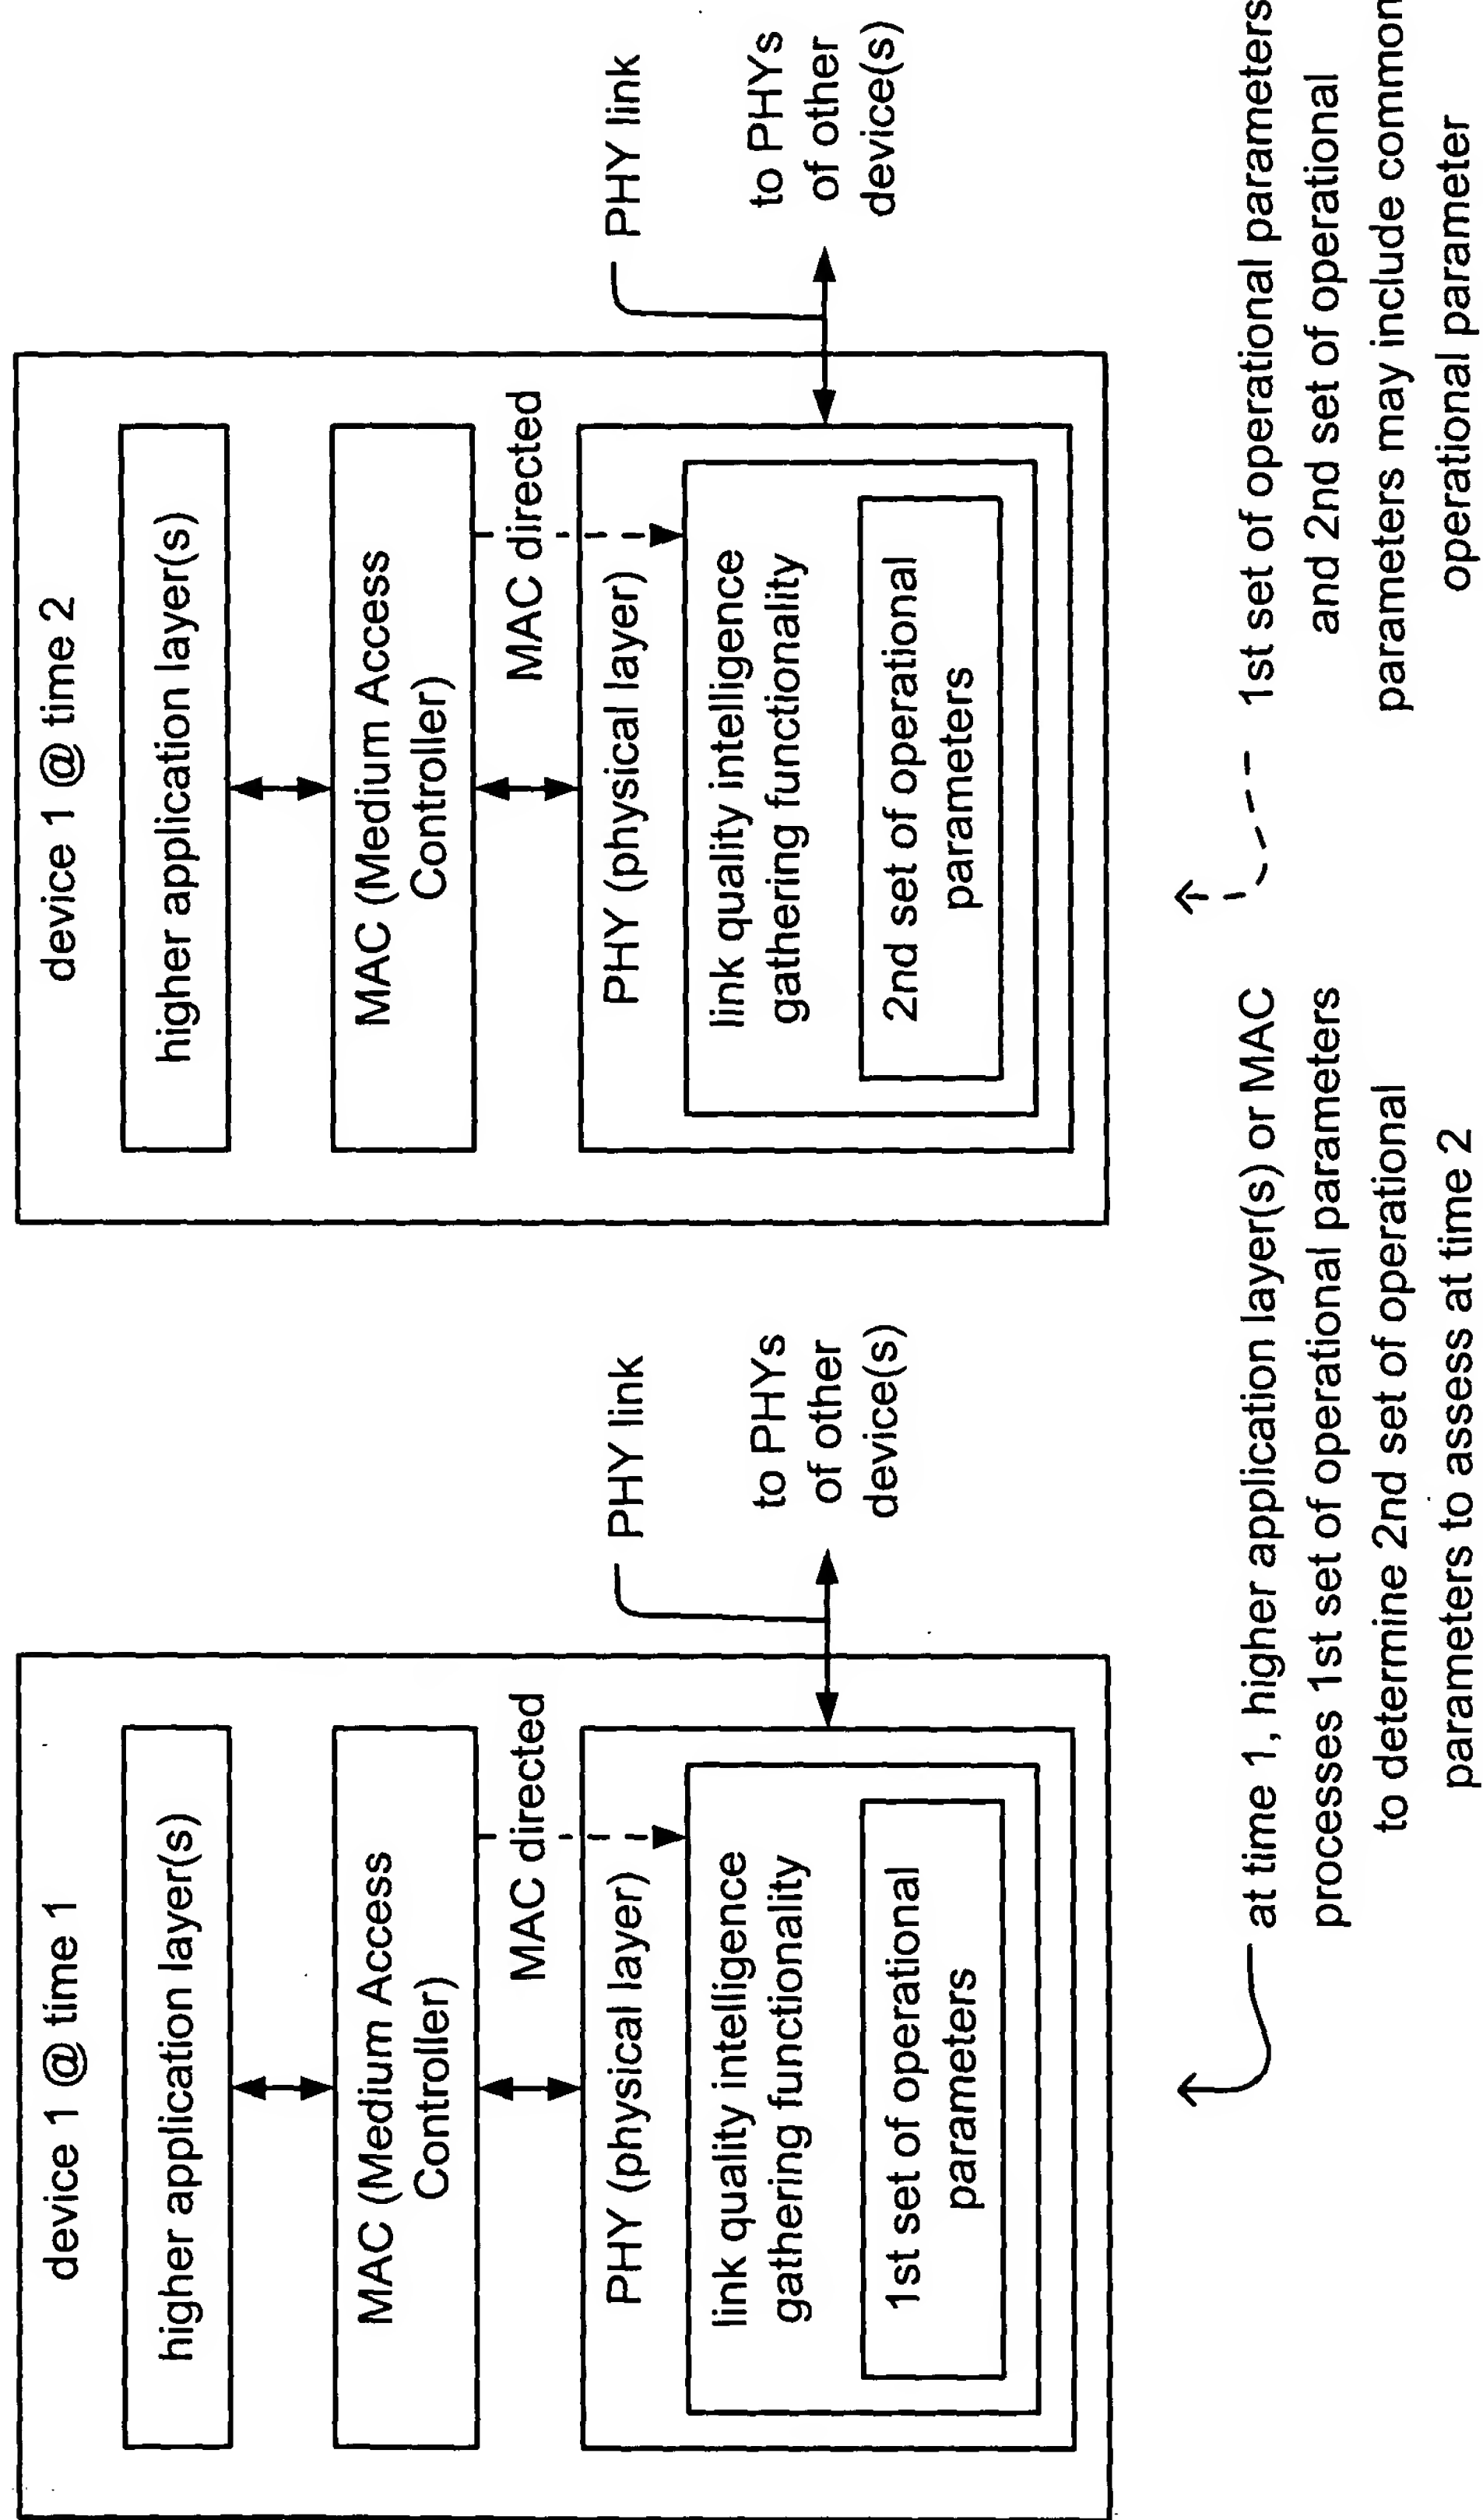

to higher application layer(s)    higher application layer(s) may also support similar functionality as MAC

MAC (Medium Access Controller) directed device interaction with network

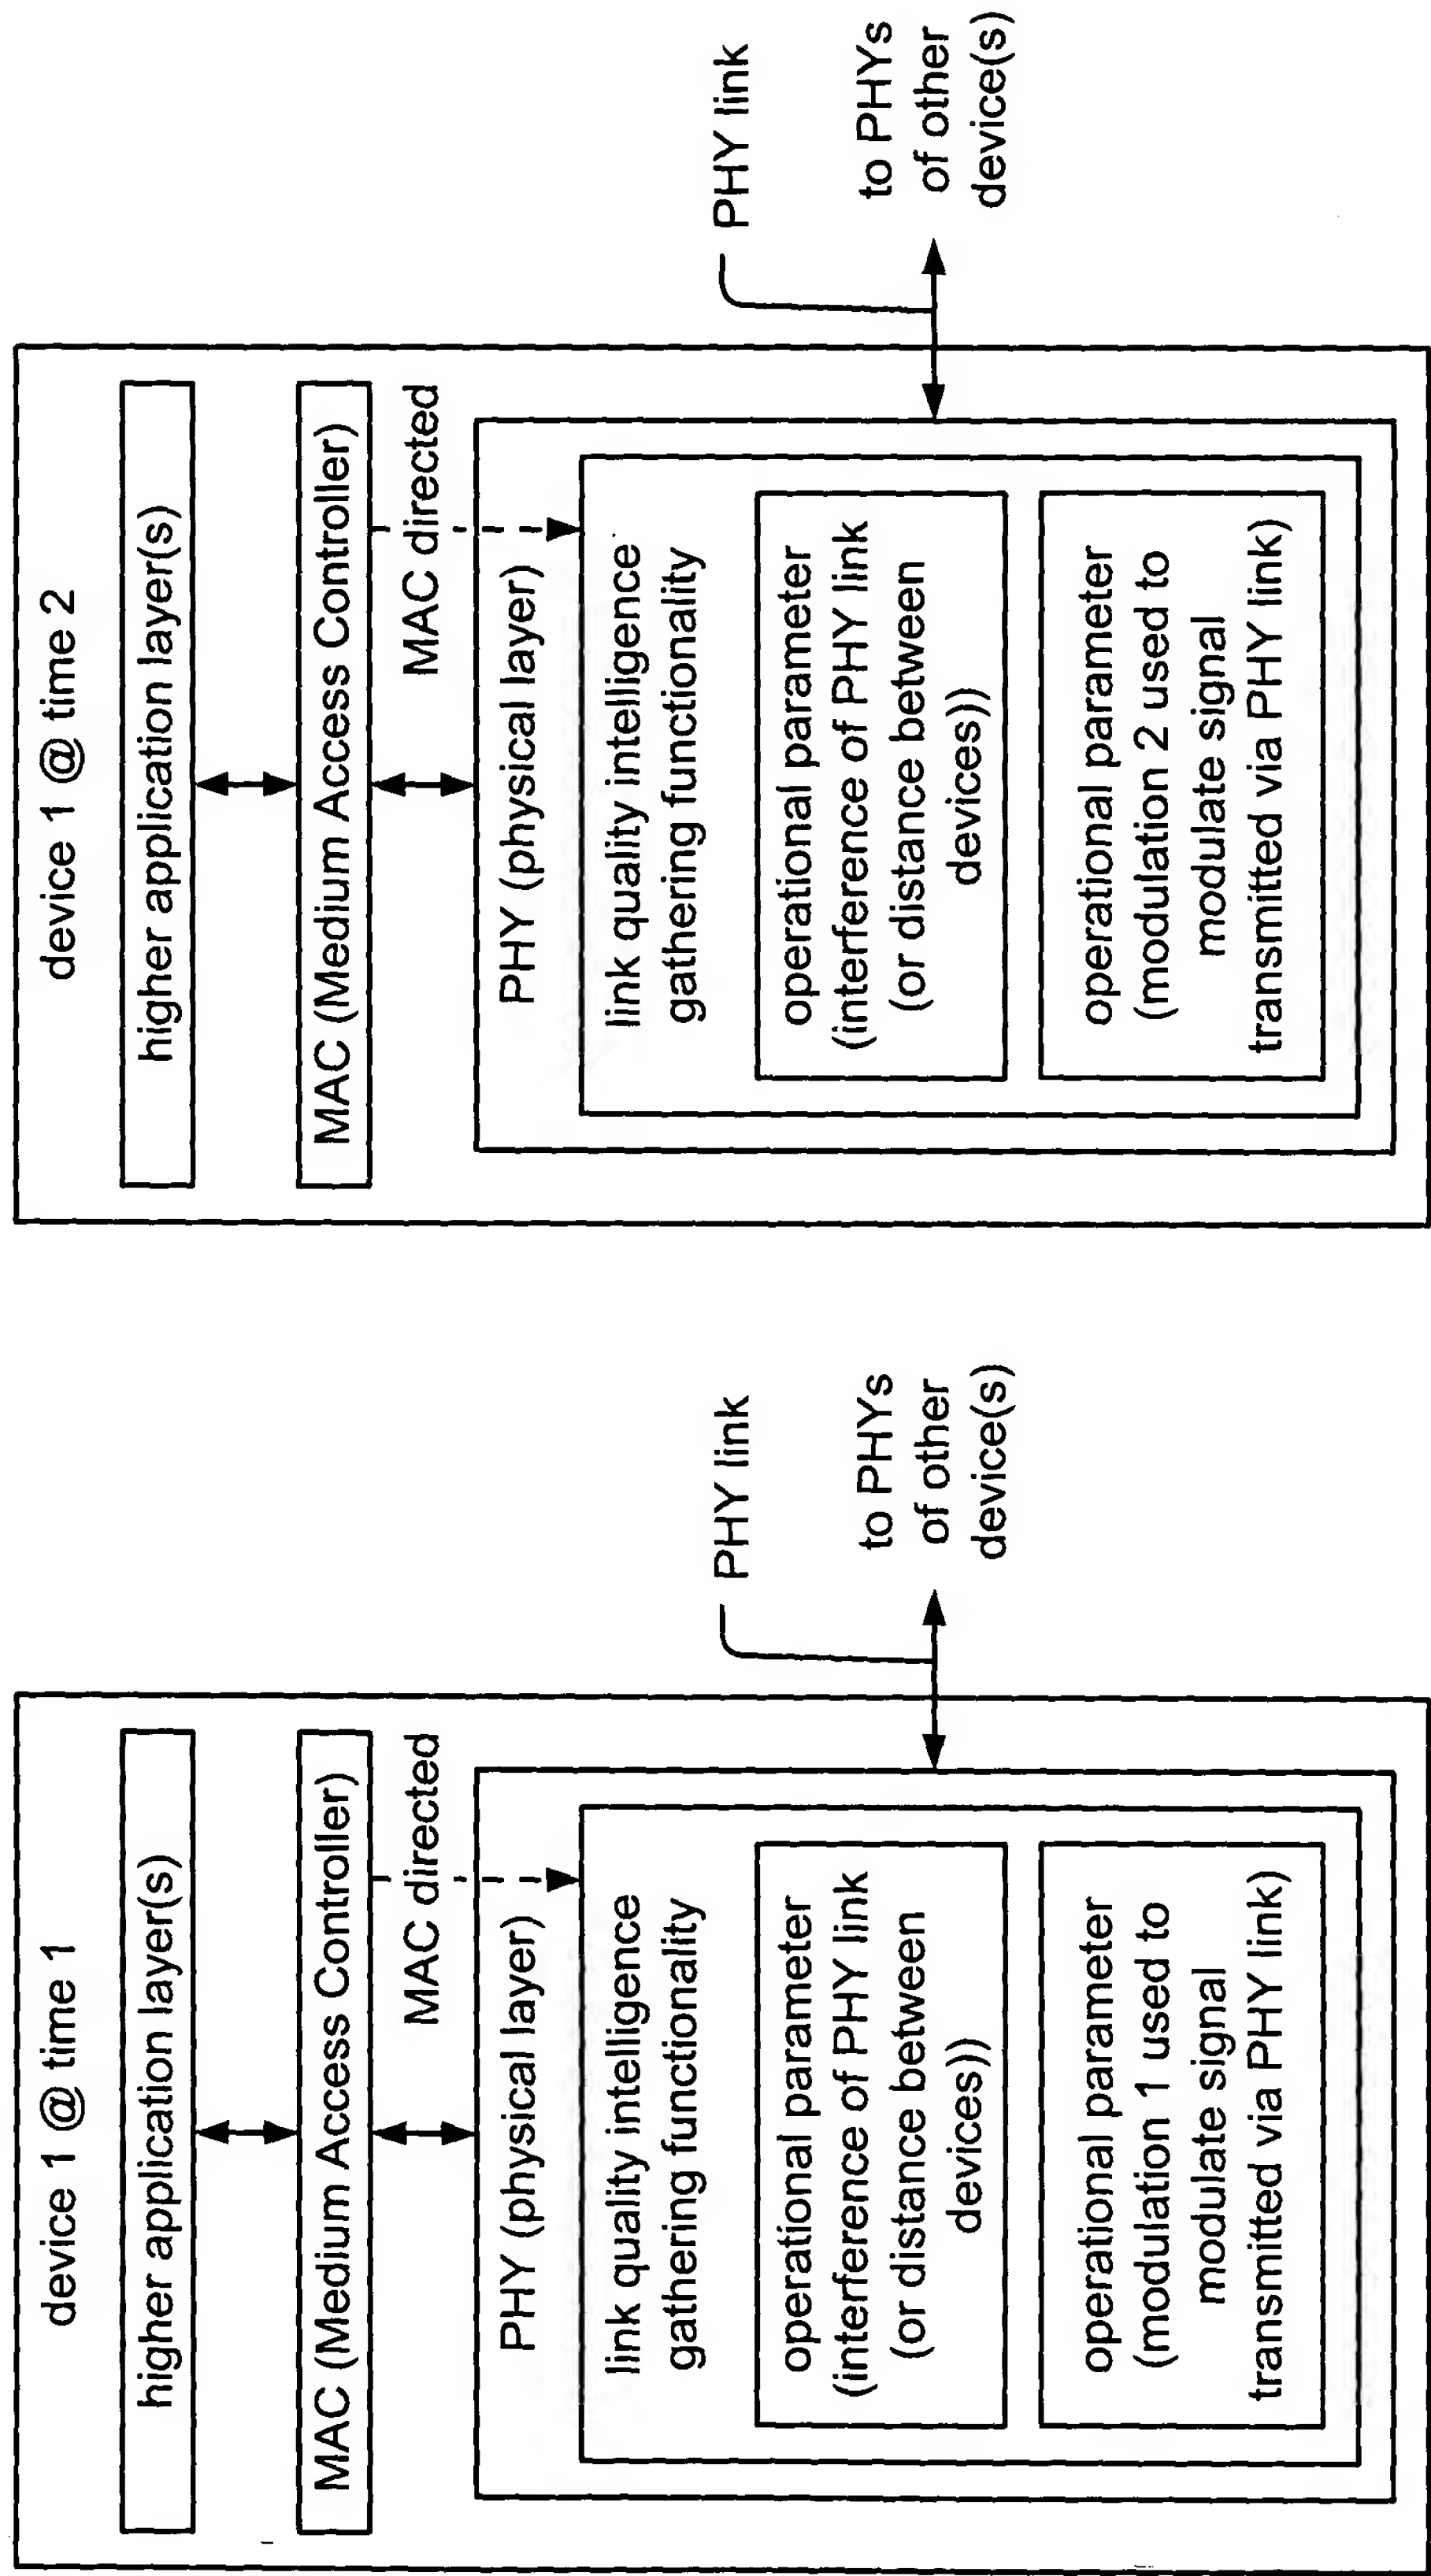

**Fig. 9**

### assessing different sets of operational parameters at different times

**Fig. 10**

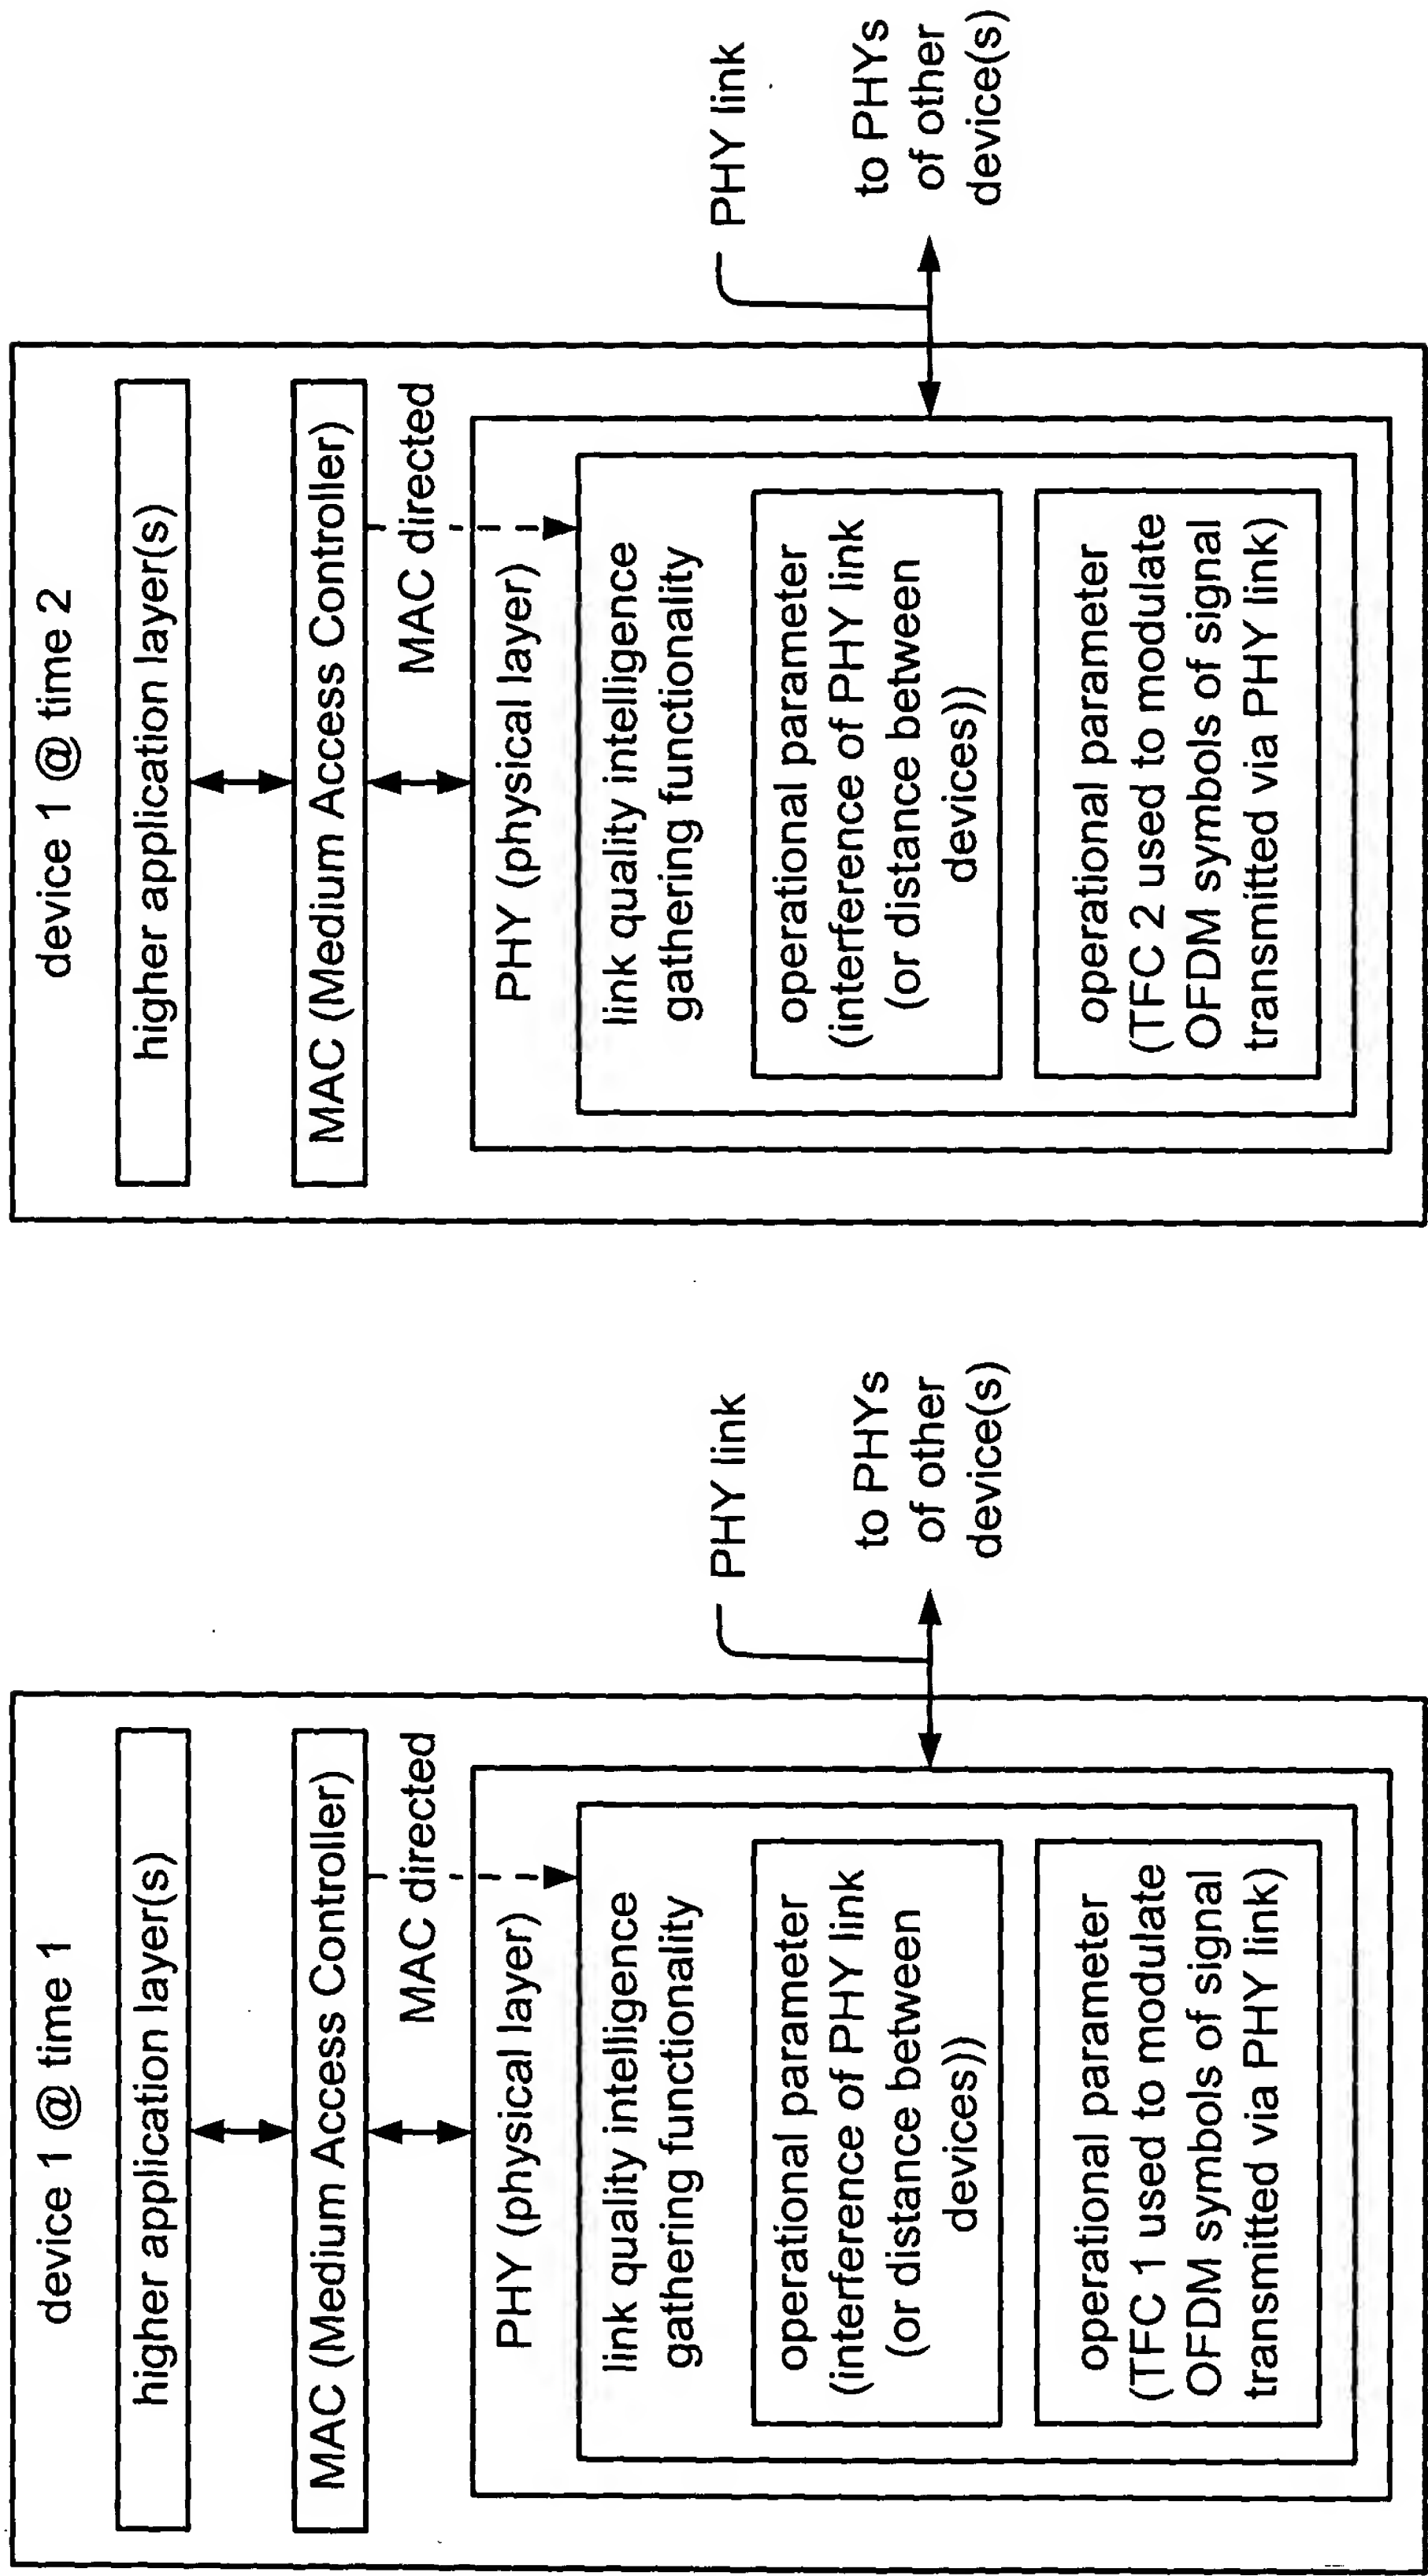

at time 1, higher application layer(s) or MAC monitors interference of PHY link (or distance between devices) and may modify modulation (from 1 to 2) used to modulate signal transmitted via PHY link at time 2

modifying 1 operational parameter based on change of another

**Fig. 11**

at time 1, higher application layer(s) or MAC monitors interference of PHY link (or distance between devices) and may modify TFC (from 1 to 2) used to modulate OFDM symbols of signal transmitted via PHY link at time 2

modifying 1 operational parameter based on change of another
